PROFESSIONAL SUMMARY

Artificial Intelligence undergraduate skilled in building full-stack applications and machine learning systems with Python, Next.js, and Firebase. Experienced in AI-assisted development and prompt engineering to ship clean, production-quality code. Has architected scalable, object-oriented software and independently shipped projects spanning e-commerce, healthcare, and data science. Seeking an AI/Software Engineering internship to apply these skills at scale.

TECHNICAL SKILLS

Programming Languages: Python, C++, JavaScript, HTML, CSS
Machine Learning & Data: Scikit-learn, NumPy, Pandas, Matplotlib, Seaborn
Web Development: Next.js, Firebase, Cloudinary, Streamlit, Vercel
Developer Tools: Git, GitHub, VS Code, Qt Creator
AI Tools & Prompt Engineering: ChatGPT, Claude Code, Cursor, OpenAI Codex, Google Gemini, n8n, Canva

PROJECTS

PakTech — Full-Stack E-Commerce Platform | *Next.js, Firebase, Cloudinary, Vercel*

- Engineered a full-stack e-commerce platform for a Pakistani tech accessories brand using Next.js, Firebase Authentication, and Firestore.
- Designed an editorial, dark-themed UI with an interactive hero section featuring real-time 3D mouse-tracking and lerp-based motion effects.
- Integrated Cloudinary for media delivery and deployed on Vercel, using AI-assisted development tools to accelerate iteration and maintain clean code.

Drug Classifier — Machine Learning Web App | *Python, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Streamlit*

- Built a supervised machine learning pipeline in Python using Logistic Regression and K-Nearest Neighbors to classify optimal drug prescriptions from clinical data.
- Performed data preprocessing, exploratory analysis, and visualization with Pandas, NumPy, Matplotlib, and Seaborn to evaluate model performance.
- Deployed an interactive Streamlit app with a glassmorphism UI, decoupled from the trained models to enable real-time predictions without retraining.

FitZone — Gym Management Desktop App | *C++, Qt Creator, Object-Oriented Programming*

- Architected a gym management desktop application in C++11 with Qt6, structuring a scalable 20-class system across three architectural layers.
- Designed core modules for membership, scheduling, and billing management, applying encapsulation, inheritance, and polymorphism for maintainable code.
- Authored comprehensive technical documentation covering system architecture and class design for a university course project.

KidCare Clinic — Hospital Management Web App | *HTML, CSS, JavaScript*

- Built a full-featured hospital management web app in vanilla HTML, CSS, and JavaScript, using localStorage for client-side data persistence.
- Developed role-based portals for Admin and Doctor users, each with tailored dashboards, permissions, and workflows.
- Implemented a multi-step appointment booking system and integrated Chart.js for real-time scheduling analytics.

EDUCATION

Bachelor of Science in Artificial Intelligence
Air University — Expected Graduation: 2029
Relevant Coursework: Object-Oriented Programming, Digital Logic Design, Machine Learning

CERTIFICATIONS

Prompt Engineering for AI Applications — Alison | AI for Beginners — HP LIFE
Basics of Machine Learning Algorithms — UniAthena × Cambridge Intl. Qualifications | Basics of Python — UniAthena × Cambridge Intl. Qualifications
Data Analytics Job Simulation — *Deloitte* × Forage | Data Analytics Job Simulation — *Quantium* × Forage
Create Your First Python Program — UST (Coursera) | Graphic Design: LinkedIn 3D Effect with Canva — Coursera

ACHIEVEMENTS

6th Regional & 30th National — Kangaroo International Mathematics Competition
100/100 — Wafaq-ul-Madaris Examination
2nd Position — Cambridge Language Council Presentation Competition

LANGUAGES

English, Urdu
